Unico, Inc. recently reported that the company intends to add an additional step to the processing of gold (Au) and silver (Ag) at the mill and processing facility at the Deer Trail Mine in Marysvale, Utah. The company's metallurgical engineer has developed an economical solution, and engineering work is currently being conducted to finalize the design and blueprints. Once completed, the company expects to begin extracting silver and gold from its recently produced concentrate using an alternative processing method.

The final product is expected to consist of gold and silver bullion. Results of on-site metallurgical test work have led the company to pursue the alternative method of recovering the precious metals contained in the sulfide concentrate produced at the Deer Trail mill.

"I fully support the company's plans related to the extraction of gold and silver from the concentrate produced at the Deer Trail site and am pleased to add to my common stock position at this time," stated Mr. Brown.
